Figure 1 is a block diagram of a television system (100). The system includes a television (201) and a host control unit (300). The television (201) is composed of a display unit (202), a system control unit (205), and a host control unit (208). The display unit (202) includes a liquid crystal display (203) and a speaker (204). The system control unit (205) includes a CPU (206) and a ROM (207). The host control unit (208) includes a RAM (209) and a ROM (210). The host control unit (208) is connected to the host control unit (300) via a host control line (211). The host control unit (300) includes a host control unit (301) and a host control unit (302).

## (54) CATALOGUE SHOPPING SYSTEM

(57)Abstract:

PURPOSE: To obtain a flexible system easily correcting the contents (prices, selling periods, etc.) of a catalogue.

CONSTITUTION: A terminal body 200 is provided with a system control part 201, and when required commodity genre, price, paying method, etc., are inputted from an input part 203, an electronic publishing medium such as a CD-ROM storing catalogue information is accessed and a corresponding commodity is displayed on a display part 202. When purchase requesting operation is executed while observing the displayed commodity, ordering information is transmitted to a selling company through a MODEM 205 and a telephone line and a host control part 300 executes the information processing of selling success or failure. A system control part 201 is provided with a rewritable storage part 221, and when a part of the contents of the CD-ROM or the like is changed, changing data (a program, a price, validity term information, etc.,) are requested to the control part 300 and commodity purchasing data processing is executed by using an up-to-date program, up-to-date, and so on.
